What's New in Boards & Commissions

New Features

Webpage Designer fixes: member contact information and the Single Board option

We've made some fixes to the public webpage, at the top of a member's page. The information that's displayed is configured in **Tools > Webpage Designer** on the Member Contact Info section.

- Only the fields selected in the Member Contact Info section are displayed.
- Commas between city, state, and zip are not displayed when those fields are blank.
- We have also fixed a regression with the webpage widget so that selecting Single Board and Detail Pane now displays only the selected board.

Increased font size for mobile viewing

The application now has a more readable font size when viewed from a mobile device.

People, Appointments, and Details not scrolling for iOS users

Pages now scroll properly on iOS mobile devices.

Bug Fixes

Board Details Customizer has two Term Length fields

Term length is now listed only once in the Board Customizer.

Unable to create Board Packet with a "not eligible" application

- **SalesForce Case #229870**

You can now create application packets using applications with a "not eligible" status.

Cannot delete District from the Application Builder if question is flagged as required

The District question can now be deleted from the form regardless of whether it's flagged as required.

What's New in Media Manager

Bug Fixes

HTML Minutes Templates: voting results out of order in zoning commission minutes

- **SalesForce Case #184835**

Attendees in votes and roll calls now display in the correct order after being removed and re-added.

Only the first page of an agenda displays for iOS users

- **SalesForce Case #228667**

iOS-based devices now correctly display all pages of PDF documents in view pages.

What's New in Peak Agenda Management

Bug Fixes

Long meeting body name overruns borders of agenda item card

Longer meeting body names (and the meeting date) now display correctly on agenda item cards. This applies to the Items and Item Details pages.

The last letter of "PUBLISH" and "DOWNLOAD" drops to the next line in agenda details popover windows (Safari users)

We've adjusted the font for the popover windows in the left menu on Agenda Details view. The words "PUBLISH" and "DOWNLOAD" now display properly without wrapping to the next line.

Agenda report: space between agenda item numbering and agenda item title needed

We've added some spacing between the numbering and title of agenda items on the default agenda template. This will also affect customized templates implemented by the deployment team.

Peak supports .tif files as agenda item attachments, but a corresponding image icon is not displayed

Image icons appear next to agenda item attachments to help you quickly identify the file type. There is now an image icon for a .tif or .tiff file attached to an agenda item. Additionally, the corresponding icon displays next to extensions for any valid file types created in all caps (e.g., .TIFF).

Extraneous Spacing on Agenda Report

We've eliminated unnecessary spacing on the default agenda report (for example, when an agenda section does not have agenda items). This fix is backward compatible with any customized agenda report templates the deployment team may create for a Peak customer.

Numbered agenda items do not display as numbered in Media Manager or iLegislate

Numbering is now preserved on sections and agenda items when agendas are published to the platform and iLegislate. In the platform, specifically, the numbering becomes part of the agenda sections and items as text. If you use the platform to add additional sections or agenda items, you'll need to include the numbering as part of the text of the agenda section or item name. If additional changes to the agenda are needed after publishing, it's recommended they are made in Peak and the agenda republished to iLegislate.

Peak Calendar not displaying properly

- **SalesForce Case #237572**

We've restored the Calendar display by updating code to use a previous version of third-party software utilized by Peak. The software was causing an incompatibility with the calendar.

UFC — PDF collation failure on agenda packets

We've improved attachment handling for Peak agenda packets.
